

ULtraFP Network Access Controller

ULtraAC2602/2604

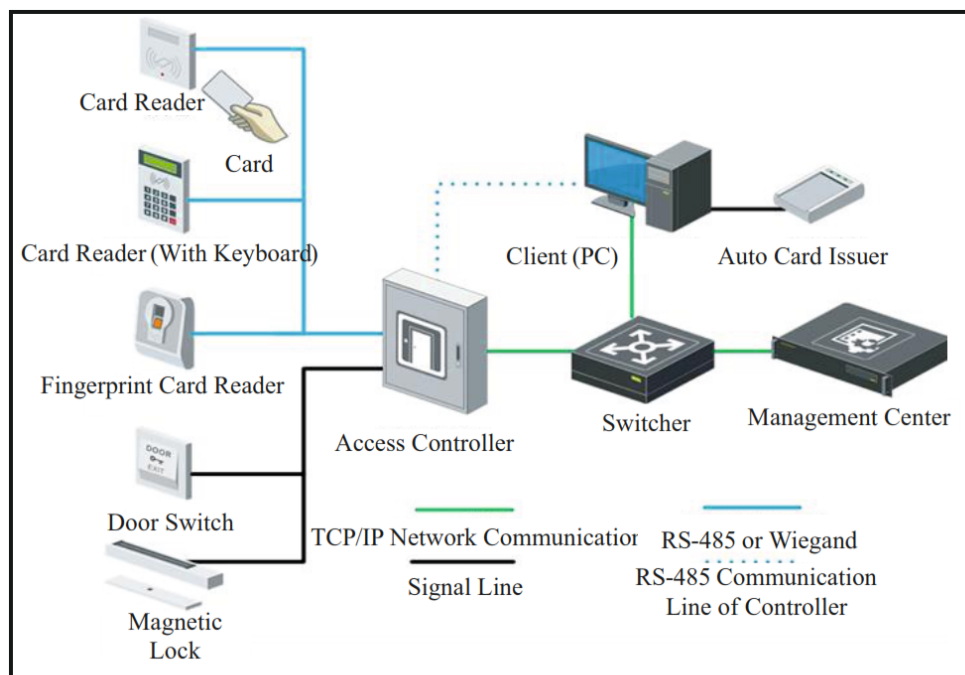

ULtraAC2602/2604 access controller is designed with latest structure with TCP/IP and RS485 communication interface. The communication data is encrypted to improve the security of system. The controller also supports offline operation and is designed with tamper-proof switch.

Main Features

- 32-bit high-speed processor
- TCP/IP network communication, with self-adaptive network interface. The communication data is encrypted to ensure information security.
- The recognition and storage of card number with maximum 20 digits. Massive storage with 100,000 (can be expanded to 200,000) cards information and 300,000 (can be expanded to 600,000) access control events.
- Supports multi-door interlocking function (ULtraAC2602, and ULtraAC2604), anti-passback function, multi-card function, first card function, super card and super password function.
- Online upgrade function and online remote control of the doors.

- Various indicators to show different device status
- Supports time synchronization via NTP, manual or automatic method
- Supports alarm event upload (including tamper-proof alarm, unsecured door alarm, forced entry alarm, delayed door alarm, duress card and code alarm, blacklist alarm and alarm for invalid card swiping attempts alarm).
- Short circuit attempts alarm and open circuit attempt alarm
- Supports zone alarm input
- Supports RS485 interface and Wiegand interface for accessing card reader. Wiegand interface supports W26/W34 and is seamlessly compatible with third-party card reader with Wiegand
- Interface Supports various card types such as normal/ disabled/ blacklist/ patrol/ guest/ duress
- Supports standby battery
- Watchdog for device running status detection
